Education

University of Utah **Salt Lake City, UT**
B.S. Computer Science *August 2020 – May 2025*

Relevant Coursework: Computer Systems, Machine Learning, Computer Graphics, Algorithms, Software Practice I & II, Database Systems, Computer Networks, Foundations of Data Analysis, Models of Computation, and Linear Algebra.

Skills

Languages: Python, TypeScript, C++, SQL, Java

Software: Pandas, NumPy, React, Node.js, AWS, Azure, Docker, Next.js, .NET, REST, Django, MongoDB, Linux

Experience

L3Harris Technologies **Dallas, TX**
Associate Software Engineer *June 2025 – Present*

- Built containerized Java and Python microservices for high-frequency defense sensor data ingestion and storage using Spring Boot patterns, applying strict transaction integrity and reliability under latency constraints.
- Developed signal processing algorithms in Python and C++ on embedded Linux systems, meeting strict resource constraints through low-level profiling and optimization in collaboration with hardware teams.
- Automated CI/CD pipelines with static code analysis and integration testing using Jenkins-style build tooling, reducing deployment friction across multiple production services.

Doxy.me **Charleston, SC**
Software Engineer *August 2024 – May 2025*

- Shipped full-stack features across a React and TypeScript frontend and Python backend APIs, integrating WebRTC real-time video into user-facing clinical workflows and deploying to AWS with zero-downtime CI/CD pipelines.
- Built and deployed ML inference pipelines on AWS SageMaker and Fargate, owning reliability, observability, and incident response across multiple production services used daily by thousands of healthcare providers.
- Automated development workflows and testing infrastructure, applying tooling improvements that reduced manual toil across the engineering team's software delivery lifecycle.

HEXstream **Chicago, IL**
Software Engineering Intern *May 2022 – Aug 2022*

- Engineered backend ETL pipelines integrating data from 25+ enterprise sources into Azure SQL and Azure Data Lake.
- Developed automated workflows for ingestion, cleansing, and aggregation, supporting distributed analytics systems.

Projects

University Course Planning/Review Platform *(Class Best):* Built a multi-service data platform enabling student schedule matching, course overlap detection, and behavioral insights. Developed ETL pipelines in Python to process thousands of course records, user preferences, and time-series activity logs. Built a responsive frontend in React + Tailwind with interactive dashboards, heatmaps, and calendar visualizations.
Telehealth Mental Health Diagnosis Tool (Doxy.me): Built an AI system that analyzes visual, speech, and tonal cues from telehealth sessions using PyTorch and Llama, delivering structured mental health insights to treating physicians via SageMaker and Fargate inference pipelines. Improved diagnostic accuracy using reinforcement learning and WebRTC video integration.
Configuration Fuzzer: Developed a configuration fuzzing tool for OSS-Fuzz, automating build generation to identify critical compile-time configurations and improve code coverage, uncovering previously untested code paths and increasing bug detection effectiveness.
