Raj Reddy

(352) 530-3397 rajreddy23@outlook.com github.com/rjrddy linkedin.com/in/raj-reddy-1 raj-reddy.com

Education

University of Utah **Salt Lake City, UT**
B.S. Computer Science *August 2020 – May 2025*

Relevant Coursework: Computer Systems, Machine Learning, Computer Graphics, Algorithms, Software Practice I & II, Database Systems, Computer Networks, Foundations of Data Analysis, Models of Computation, and Linear Algebra.

Skills

Languages: Python, TypeScript, C++, SQL, Java

Software: Pandas, NumPy, React, Node.js, AWS, Azure, Docker, Next.js, .NET, REST, Django, MongoDB, Linux

Experience

L3Harris Technologies **Dallas, TX**
Associate Software Engineer *June 2025 – Present*

- Owned signal processing modules end to end on ambiguous, fast-moving defense projects, translating unclear technical requirements into working software directly for hardware stakeholders with no formal spec to start from.
- Built monitoring and CI/CD tooling from scratch on my own initiative, creating processes where none existed rather than following an established playbook.
- Delivered production releases under strict timelines, acting as the primary technical point of contact between engineering and hardware program stakeholders.

Doxy.me **Charleston, SC**
Software Engineer *August 2024 – May 2025*

- Earned my role at Doxy.me by cold emailing the CTO and independently building a working mental health inference prototype, translating a business need physicians described into a deployed technical solution before a role existed.
- Owned the relationship between engineering output and clinical stakeholders, explaining model behavior and tradeoffs in plain terms to build trust with non-technical users of the platform.
- Built TypeScript frontend components and Python backend services end to end, shipping features fast in an environment where priorities shifted week to week.

University of Utah **Salt Lake City, UT**
Undergraduate Research Assistant – FuTURES Lab *May 2024 – Jun 2025*

- Analyzed and optimized large-scale datasets, enhancing software configuration testing with gcov and CMake, increasing code coverage by 30% on real-world APIs (Libpng, PyTorch).
- Expanded OSS-Fuzz testing coverage using compile-time options to improve the robustness of full-stack libraries.

Projects

University Course Planning/Review Platform *(Class Best):* Built a multi-service data platform enabling student schedule matching, course overlap detection, and behavioral insights. Developed ETL pipelines in Python to process thousands of course records, user preferences, and time-series activity logs. Built a responsive frontend in React + Tailwind with interactive dashboards, heatmaps, and calendar visualizations.

Telehealth Mental Health Diagnosis Tool (Doxy.me): Built an AI system that analyzes visual, speech, and tonal cues from telehealth sessions using PyTorch and Llama, delivering structured mental health insights to treating physicians via SageMaker and Fargate inference pipelines. Improved diagnostic accuracy using reinforcement learning and WebRTC video integration.
