

Education

University of UtahSalt Lake City, UT
B.S. Computer ScienceAugust 2020 – May 2025

Relevant Coursework: Computer Systems, Machine Learning, Computer Graphics, Algorithms, Software Practice I & II, Database Systems, Computer Networks, Foundations of Data Analysis, Models of Computation, and Linear Algebra.

Skills

Languages: Python, C++ , Java, TypeScript, SQL

Software: PyTorch, NumPy, Pandas, SageMaker, Fargate, AWS, Docker, scikit-learn, Linux, REST, Django

Experience

Doxy.meCharleston, SC
Software Engineering InternAugust 2024 – May 2025

- Built transformer-based models with PyTorch and Llama, integrating WebRTC for real-time video streaming.
- Deployed inference pipelines on SageMaker & Fargate, improving diagnostic accuracy with reinforcement learning.
- Authored and maintained YAML-based configuration files for CI/CD pipelines, cloud infrastructure, and application deployments, enabling reproducible environments and streamlined releases.

L3Harris TechnologiesGreenville, TX
Associate Software EngineerJune 2025 – Present

- Developed real-time signal processing algorithms in Python and C++ on embedded systems, applying DSP techniques for defense sensor data streams.
- Built microservices for high-frequency data ingestion and storage, leveraging Podman and serverless infrastructure on AWS.
- Automated CI/CD pipelines with static code analysis and integration testing.

University of UtahSalt Lake City, UT
Undergraduate Research Assistant – FuTURES LabMay 2024 – Jun 2025

- Analyzed and optimized large-scale datasets, enhancing software configuration testing with gcov and CMake, increasing code coverage by 30% on real-world APIs (Libpng, PyTorch).
- Expanded OSS-Fuzz testing coverage using compile-time options to improve the robustness of full-stack libraries.

HEXstreamChicago, IL
Software Engineering InternMay 2022 – Aug 2022

- Engineered backend ETL pipelines integrating data from 25+ enterprise sources into Azure SQL and Azure Data Lake.
- Developed automated workflows for ingestion, cleansing, and aggregation, supporting distributed analytics systems.

Projects

Telehealth Mental Health Diagnosis Tool (Doxy.me): Built an AI system that analyzes visual, speech, and tonal cues from telehealth sessions using PyTorch and Llama, delivering structured mental health insights to treating physicians via SageMaker and Fargate inference pipelines. Improved diagnostic accuracy using reinforcement learning and WebRTC video integration.

University Course Planning/Review Platform (Class Best): Built a multi-service data platform enabling student schedule matching, course overlap detection, and behavioral insights. Developed ETL pipelines in Python to process thousands of course records, user preferences, and time-series activity logs. Built a responsive frontend in React + Tailwind with interactive dashboards, heatmaps, and calendar visualizations.

Configuration Fuzzer: Developed a configuration fuzzing tool for OSS-Fuzz, automating build generation to identify critical compile-time configurations and improve code coverage, uncovering previously untested code paths and increasing bug detection effectiveness.
