

Education

University of Utah
B.S. Computer Science

Salt Lake City, UT
August 2020 – May 2025

Relevant Coursework: Computer Systems, Machine Learning, Computer Graphics, Algorithms, Software Practice I & II, Database Systems, Computer Networks, Foundations of Data Analysis, Models of Computation, and Linear Algebra.

Skills

Languages: Python, TypeScript, C++ , SQL, Java

Software: Pandas, NumPy, React, Node.js, AWS, Azure, Docker, Next.js, .NET, REST, Django, MongoDB, Linux

Experience

L3Harris Technologies
Associate Software Engineer

Dallas, TX
June 2025 – Present

- Developed signal processing modules in Python and C++ on embedded systems, collaborating with hardware teams to optimize performance and resource utilization.
- Built microservices for high-frequency data ingestion, processing, and storage, leveraging Podman and serverless functions.
- Automated CI/CD testing with pipelines, integrating static code analysis and integration testing.

Doxy.me
Software Engineer

Charleston, SC
August 2024 – May 2025

- Shipped patient-facing and provider-facing clinical products end to end on a small startup team, owning React and TypeScript frontends, Node.js backend services on AWS Fargate, and WebRTC real-time video integrations from design through production with no dedicated PM.
- Improved data throughput and diagnostic accuracy by building Python and TypeScript pipelines that ingested unstructured session data, ran LLM inference (PyTorch, Llama) on SageMaker, and persisted structured outputs to downstream PostgreSQL analytics tables used daily by clinical teams.
- Reduced deployment overhead and environment drift by owning YAML-based CI/CD configuration and Fargate infrastructure automation, enabling zero-downtime releases across multiple production services at startup velocity.

HEXstream
Software Engineering Intern

Chicago, IL
May 2022 – Aug 2022

- Engineered backend ETL pipelines integrating data from 25+ enterprise sources into Azure SQL and Azure Data Lake.
 - Developed automated workflows for ingestion, cleansing, and aggregation, supporting distributed analytics systems.
-

Projects

University Course Planning/Review Platform (Class Best): Built a multi-service data platform enabling student schedule matching, course overlap detection, and behavioral insights. Developed ETL pipelines in Python to process thousands of course records, user preferences, and time-series activity logs. Built a responsive frontend in React + Tailwind with interactive dashboards, heatmaps, and calendar visualizations.

Telehealth Mental Health Diagnosis Tool (Doxy.me): Built an AI system that analyzes visual, speech, and tonal cues from telehealth sessions using PyTorch and Llama, delivering structured mental health insights to treating physicians via SageMaker and Fargate inference pipelines. Improved diagnostic accuracy using reinforcement learning and WebRTC video integration.

Configuration Fuzzer: Developed a configuration fuzzing tool for OSS-Fuzz, automating build generation to identify critical compile-time configurations and improve code coverage, uncovering previously untested code paths and increasing bug detection effectiveness.
