

Education

University of Utah B.S. Computer Science	Salt Lake City, UT August 2020 – May 2025
Relevant Coursework: Computer Systems, Machine Learning, Computer Graphics, Algorithms, Software Practice I & II, Database Systems, Computer Networks, Foundations of Data Analysis, Models of Computation, and Linear Algebra.	

Skills

Languages: Python, TypeScript, C++ , SQL, Java Software: Pandas, NumPy, React, Node.js, AWS, Azure, Docker, Next.js, .NET, REST, Django, MongoDB, Linux

Experience

L3Harris Technologies Associate Software Engineer • Developed real-time signal processing algorithms in Python and C++ on embedded systems, applying DSP techniques for defense sensor data streams. • Built microservices for high-frequency data ingestion and storage, leveraging Podman and serverless infrastructure on AWS. • Automated CI/CD pipelines with static code analysis and integration testing.	Dallas, TX June 2025 – Present
Doxy.me Software Engineer • Built a document-grounded question-answering system for Doxy.me’s telehealth platform, fine-tuning Llama models to extract and summarize structured clinical signals from unstructured session data, served via SageMaker and Fargate. • Improved answer accuracy by designing an RL feedback loop over physician-validated outcomes, closing the gap between retrieved evidence and the model’s conclusions. • Standardized CI/CD configuration across the ML stack, enabling reliable, zero-downtime releases for a small engineering team.	Charleston, SC August 2024 – May 2025
University of Utah Undergraduate Research Assistant – FuTURES Lab • Analyzed and optimized large-scale datasets, enhancing software configuration testing with gcov and CMake, increasing code coverage by 30% on real-world APIs (Libpng, PyTorch). • Expanded OSS-Fuzz testing coverage using compile-time options to improve the robustness of full-stack libraries.	Salt Lake City, UT May 2024 – Jun 2025
HEXstream Software Engineering Intern • Engineered backend ETL pipelines integrating data from 25+ enterprise sources into Azure SQL and Azure Data Lake. • Developed automated workflows for ingestion, cleansing, and aggregation, supporting distributed analytics systems.	Chicago, IL May 2022 – Aug 2022

Projects

Telehealth Mental Health Diagnosis Tool (Doxy.me): Built an AI system that analyzes visual, speech, and tonal cues from telehealth sessions using PyTorch and Llama, delivering structured mental health insights to treating physicians via SageMaker and Fargate inference pipelines. Improved diagnostic accuracy using reinforcement learning and WebRTC video integration.

University Course Planning/Review Platform (Class Best): Built a multi-service data platform enabling student schedule matching, course overlap detection, and behavioral insights. Developed ETL pipelines in Python to process thousands of course records, user preferences, and time-series activity logs. Built a responsive frontend in React + Tailwind with interactive dashboards, heatmaps, and calendar visualizations.

Configuration Fuzzer: Developed a configuration fuzzing tool for OSS-Fuzz, automating build generation to identify critical compile-time configurations and improve code coverage, uncovering previously untested code paths and increasing bug detection effectiveness.
