

## Education

**University of Utah**

*B.S. Computer Science*

**Salt Lake City, UT**

*August 2020 – May 2025*

**Relevant Coursework:** Computer Systems, Machine Learning, Computer Graphics, Algorithms, Software Practice I & II, Database Systems, Computer Networks, Foundations of Data Analysis, Models of Computation, and Linear Algebra.

---

## Skills

**Languages:** Python, TypeScript, C++, SQL, Java

**Software:** Pandas, NumPy, React, Node.js, AWS, Azure, Docker, Next.js, .NET, REST, Django, MongoDB, Linux

---

## Experience

**L3Harris Technologies**

*Associate Software Engineer*

**Dallas, TX**

*June 2025 – Present*

- Owned signal processing modules end to end on ambiguous, fast-moving embedded defense projects, translating loosely defined hardware constraints into working software with no formal spec to start from.
- Built microservices and CI/CD tooling from scratch on my own initiative, closing gaps in testing and deployment coverage that nobody had assigned to me.
- Delivered production releases under strict latency and resource constraints, communicating tradeoffs directly to hardware stakeholders under tight timelines.

**Doxy.me**

*Software Engineer*

**Charleston, SC**

*August 2024 – May 2025*

- Owned a real-time ML inference product end to end on a small startup team with no dedicated PM, from initial prototype to production serving live clinical sessions, fine-tuning Llama models and deploying via SageMaker and Fargate.
- Reverse engineered unstructured WebRTC session data and clinical inputs into a structured inference pipeline from first principles, since no existing template or vendor tooling covered the problem.
- Shipped TypeScript frontend components and backend services under live production constraints, closing the gap between an idea and a working feature in days and owning that distance alone.

**University of Utah**

*Undergraduate Research Assistant – FuTURES Lab*

**Salt Lake City, UT**

*May 2024 – Jun 2025*

- Analyzed and optimized large-scale datasets, enhancing software configuration testing with gcov and CMake, increasing code coverage by 30% on real-world APIs (Libpng, PyTorch).
  - Expanded OSS-Fuzz testing coverage using compile-time options to improve the robustness of full-stack libraries.
- 

## Projects

**Telehealth Mental Health Diagnosis Tool (Doxy.me):** Built an AI system that analyzes visual, speech, and tonal cues from telehealth sessions using PyTorch and Llama, delivering structured mental health insights to treating physicians via SageMaker and Fargate inference pipelines. Improved diagnostic accuracy using reinforcement learning and WebRTC video integration.

**University Course Planning/Review Platform (Class Best):** Built a multi-service data platform enabling student schedule matching, course overlap detection, and behavioral insights. Developed ETL pipelines in Python to process thousands of course records, user preferences, and time-series activity logs. Built a responsive frontend in React + Tailwind with interactive dashboards, heatmaps, and calendar visualizations.
