

Education

University of Utah

B.S. Computer Science

Salt Lake City, UT

August 2020 – May 2025

Relevant Coursework: Computer Systems, Machine Learning, Computer Graphics, Algorithms, Software Practice I & II, Database Systems, Computer Networks, Foundations of Data Analysis, Models of Computation, and Linear Algebra.

Skills

Languages: Python, TypeScript, C++, SQL, Java

Software: Pandas, NumPy, React, Node.js, AWS, Azure, Docker, Next.js, .NET, REST, Django, MongoDB, Linux

Experience

L3Harris Technologies

Associate Software Engineer

Dallas, TX

June 2025 – Present

- Collaborated directly with hardware and program stakeholders at a large enterprise defense contractor, translating ambiguous requirements into production software and proposing improvements beyond the original spec.
- Built microservices and CI/CD tooling reflecting modern cloud-native architecture patterns on AWS, maintaining awareness of system design across the broader platform.
- Delivered production releases under strict timelines, working cross-functionally with hardware, firmware, and program teams.

Doxy.me

Software Engineer

Charleston, SC

August 2024 – May 2025

- Owned front-end UX for a clinical AI product end to end, building React and TypeScript interfaces from concept to launch and iterating directly with physicians as end users to refine the experience.
- Built the product independently at a small startup, cold emailing Doxy.me's CTO and shipping a working prototype before the role existed, then drove it from concept through production.
- Contributed across the stack when needed, building Python backend services and integrating WebRTC video and ML inference into the frontend experience.

University of Utah

Undergraduate Research Assistant – FuTURES Lab

Salt Lake City, UT

May 2024 – Jun 2025

- Analyzed and optimized large-scale datasets, enhancing software configuration testing with gcov and CMake, increasing code coverage by 30% on real-world APIs (Libpng, PyTorch).
- Expanded OSS-Fuzz testing coverage using compile-time options to improve the robustness of full-stack libraries.

HEXstream

Software Engineering Intern

Chicago, IL

May 2022 – Aug 2022

- Engineered backend ETL pipelines integrating data from 25+ enterprise sources into Azure SQL and Azure Data Lake.
- Developed automated workflows for ingestion, cleansing, and aggregation, supporting distributed analytics systems.

Projects

University Course Planning/Review Platform (Class Best): Built a multi-service data platform enabling student schedule matching, course overlap detection, and behavioral insights. Developed ETL pipelines in Python to process thousands of course records, user preferences, and time-series activity logs. Built a responsive frontend in React + Tailwind with interactive dashboards, heatmaps, and calendar visualizations.

Ray Tracing Engine: Created an interactive WebGL-based ray tracing engine in JavaScript, featuring realistic reflections, dynamic lighting, and customizable environment maps. Implemented shaders and user controls for rendering techniques, scene adjustments, and interactivity.
