

Education

University of Utah

B.S. Computer Science

Salt Lake City, UT

August 2020 – May 2025

Relevant Coursework: Computer Systems, Machine Learning, Computer Graphics, Algorithms, Software Practice I & II, Database Systems, Computer Networks, Foundations of Data Analysis, Models of Computation, and Linear Algebra.

Skills

Languages: Python, TypeScript, C++ , SQL, Java

Software: Pandas, NumPy, React, Node.js, AWS, Azure, Docker, Next.js, .NET, REST, Django, MongoDB, Linux

Experience

L3Harris Technologies

Associate Software Engineer

Dallas, TX

June 2025 – Present

- Reduced incident response time on defense sensor platforms by building Python monitoring and diagnostic tooling that surfaced latency and throughput anomalies in real time on embedded Linux systems.
- Improved production reliability of high-frequency data ingestion microservices by designing fault-tolerant architectures with Podman and automated recovery patterns, sustaining uptime under strict resource constraints.
- Reduced deployment risk across engineering and hardware teams by building CI/CD pipelines with static analysis and integration testing, coordinating releases directly with cross-functional stakeholders under tight timelines.

Doxy.me

Software Engineer

Charleston, SC

August 2024 – May 2025

- Maintained production uptime for a live ML inference system processing real-time WebRTC video and audio sessions, troubleshooting latency and reliability issues across SageMaker and Fargate deployments.
- Reduced environment drift and release risk by standardizing CI/CD configuration with YAML-based pipelines, enabling zero-downtime deployments across the ML stack.
- Built TypeScript frontend components surfacing system health and inference status directly to clinical stakeholders, improving visibility into live production behavior.

University of Utah

Undergraduate Research Assistant – FuTURES Lab

Salt Lake City, UT

May 2024 – Jun 2025

- Analyzed and optimized large-scale datasets, enhancing software configuration testing with gcov and CMake, increasing code coverage by 30% on real-world APIs (Libpng, PyTorch).
 - Expanded OSS-Fuzz testing coverage using compile-time options to improve the robustness of full-stack libraries.
-

Projects

Configuration Fuzzer: Developed a configuration fuzzing tool for OSS-Fuzz, automating build generation to identify critical compile-time configurations and improve code coverage, uncovering previously untested code paths and increasing bug detection effectiveness.

University Course Planning/Review Platform (Class Best): Built a multi-service data platform enabling student schedule matching, course overlap detection, and behavioral insights. Developed ETL pipelines in Python to process thousands of course records, user preferences, and time-series activity logs. Built a responsive frontend in React + Tailwind with interactive dashboards, heatmaps, and calendar visualizations.
